

Uliana-Olena Sakhno

Data & Backend QA Engineer

Remote · Ukraine | sakhno.qa@gmail.com | +38 (097) 440-22-05 | [linkedin.com/in/ulianasakhnoqa](https://www.linkedin.com/in/ulianasakhnoqa) | vismyt.com.ua | github.com/VelenShell

Data-focused QA Engineer with **6 years of experience** securing backend- and data-heavy systems — from multi-database cybersecurity platforms to large-scale data migrations. I specialize in **validating data accuracy and consistency** across SQL and NoSQL stores, **source-to-target migration testing**, **API / integration testing**, and **root-cause analysis**. I work in an AI-augmented way — designing the validation logic, using AI to implement it fast, and verifying the output myself. Currently extending into **Python test automation**.

CORE STRENGTHS

- **Data / Database QA** — source-vs-target validation, data-migration testing, schema-mapping analysis, data accuracy & completeness, discrepancy investigation.
- **Backend & integration testing** — cross-system communication, API contracts, server logic, consistency under feature flags.
- **API testing** — Postman, Fiddler, REST validation; growing into API automation.
- **AI-assisted QA** — SQL validation generation, schema-mapping analysis, structured reporting, with own evals measuring where the AI is unreliable.
- **Root-cause analysis** — logs, SQL queries, multi-DB event tracing. Manual + exploratory testing, requirement analysis, test design techniques.

TECHNICAL SKILLS

Databases	PostgreSQL · MS SQL Server · BigQuery · Snowflake · MongoDB · Redis · Elasticsearch
API / Backend	Postman · Fiddler · REST · integration testing
Languages / Automation	SQL (strong) · Python (building automation) · API automation basics
QA Platforms	Jira · TestRail · PractiTest
Environments	BrowserStack · VirtualBox · VMware · Xcode · Android Studio · Chrome DevTools
Process	Agile · Scrum · Kanban

WORK EXPERIENCE

Data QA Engineer (AI-Augmented) — Agiliway Mar 2026 – Present

- **Designed and built (AI-assisted) a Python data-mapping analysis tool** that connects to source and target databases and produces a full mapping report — fully / partially / no-match — in **~5 minutes**, replacing roughly a **week of manual investigation** per migration cycle.
- **Recreated the complete mapping and transformation logic from scratch** for a legacy-to-new migration of **200+ tables**, validating accuracy and completeness against business and technical rules.
- Applied **AI-assisted QA workflows** for schema-mapping analysis and SQL validation generation, keeping final validation logic reviewable and reproducible.

QA Engineer — Backend & Data (Cybersecurity) — AllStars-IT May 2024 – Dec 2025

Project: Morphisec — endpoint protection platform

- Validated system stability across **4 databases (Redis, Snowflake, PostgreSQL, Elasticsearch)** — analyzed event ingestion, data consistency, and reporting accuracy, catching data issues before they corrupted downstream reporting.
- **Log verification & root-cause analysis** across complex multi-database workflows — traced recurring data-consistency issues to their source and shortened investigation time.

- Participated in **security-oriented testing** — surfaced potential vulnerabilities and validated protection mechanisms.
- QA Engineer — Backend & Integration — TechMagic**
Project: Huckleberry — multi-platform product (Android / iOS / Web)

Jan 2023 – May 2024
- **Backend testing** of a large multi-platform product — validated API integrations, data consistency, and server logic across platforms.
 - Tested major third-party integrations — **Stripe** (payments) and **Amplitude** (analytics) — and the product's **migration to a serverless backend**, verifying data consistency across the transition.
 - API testing with Postman and automated flows; verified behavior under **feature flags**. Reliability for thousands of end users alongside a US product team.
- QA Engineer — Cosm.care**
Canadian digital healthcare (regulated environment)

May 2022 – Dec 2022
- **Compliance testing** — validated data security, user privacy, and workflow correctness against healthcare standards.
- QA Engineer — Stepico Games**

Feb 2020 – May 2022
- Early-career foundation: full QA cycle — requirement analysis, test design, execution, defect reporting, regression, release validation.

SELECTED PROJECTS

- QA Context Radar** — AI-assisted ticket-readiness analyzer (Python · Streamlit · Claude API)
Turns a vague ticket into a structured QA brief before test design. Two deterministic scores (Completeness vs. Substance) flag tickets that look polished but resolve no real unknowns; an eval/golden-set measures where the AI is grounded vs. invented. github.com/VelenShell/qa-context-radar
- QA Job Radar** — automated job-matching pipeline (Python · GitHub Actions · Claude API)
Scheduled scraper that collects fresh QA postings, scores each against my profile with an LLM, and sends a filtered daily digest.

EDUCATION

B.Sc., Automation & Computer-Integrated Technologies
Lviv Polytechnic National University · 2017–2022

LANGUAGES

English — Advanced
Ukrainian — Native
